Playwright Automation Engineer | E2E Test Framework (Playwright) + n8n Webhook Integrations

About

Built a maintainable Playwright-based E2E test framework with Page Object Model and automated n8n webhook reporting. Focus on reliability, readable test design, and easy onboarding for QA engineers.

Project Summary

Developed a modular Playwright framework to automate end-to-end flows for an e-commerce app, improved test stability with configurable webhook calls and timeouts, and created documentation and workflow exports for predictable local and CI execution.

Key Highlights

- Implemented Page Object Model for login, cart, checkout, and order flows.
- Integrated n8n webhooks with N8N_WEBHOOK_URL and timeout-safe requests.
- Created reusable workflow JSON exports and documentation for team onboarding.
- Improved reliability with guarded HTTP calls and environment-driven configuration.
